Division for Mathematical Physics
Prof. Dr. Andreas Wacker

Second Review on the doctoral dissertation of Gerardo Suárez

Gerardo Suárez handed in a revised version of his thesis *Open Quantum Systems Beyond the Markovian Regime* for the Degree Doctor of philosophy. Here he improved on many details including most of the optional suggestions I made in my first report. This resulted in a better technical quality which is of high benefit for the future reader.

With the same reasoning as in my first report, I strongly recommend the acceptance of the thesis, which contains significant progress in the field.

Andreas Wacker
